“Manufacturing combines the things I enjoy, technology, processes, and people. When you combine all three, you can always find a better way.”

I work as part of high performance service delivery teams, drawing upon IMEC’s extensive state and national resources to help companies implement actions to improve their productivity and competitiveness.

I have more than 11 years of experience in manufacturing and management in a variety of industries. I was formerly Plant Manager of a metal roll forming company and worked within the auto parts and accessories industry to plan, organize, and lead teams in a Lean environment. I hold a Bachelor of Science degree in Professional Aeronautics from Embry Riddle Aeronautical University in Daytona Beach, Florida and am a certified Training Within Industry (TWI) Job Instructions and Job Relations Trainer and Coach.

Expertise

- Safety Management
- Project Management
- Operations Management
- Fabrication Management

Specialized Skills

- Lean Manufacturing
- Strategic Planning
- Business Management
- Training Within Industry (TWI) Job Relations and Job Instruction Trainer and Coach
- OSHA Authorized Outreach Training Provider

Results

A local manufacturer wanted help and guidance to develop and support their Lean journey. We started with addressing their safety program followed with Leadership training. We then taught them Lean tools. The resutls were an improved safety environment, the plant laid out in cells, and Pull Kanban being used. With my coaching, the manufacturer was able to proceed to the point of sustaining their Lean journey on their own.
